## Objective

Results-driven Data Analyst with 6 years of experience in the banking industry, currently transitioning into Data Engineering and Machine Learning. Pursuing a BSc (Hons) in Data Science, with hands-on expertise in data analytics, ETL processes, pipeline development, and machine learning workflows. Skilled in building scalable data solutions, developing analytical dashboards, and deploying models using tools such as MLflow, Docker, and GCP. Strong foundation in MLOps and cloud-based deployment, with a passion for delivering data-driven insights and automation. Actively seeking opportunities to contribute to impactful, innovation-focused teams.

---

## Skills

|                    |   |                                                                 |
|--------------------|---|-----------------------------------------------------------------|
| <b>Programming</b> | - | Python, SQL                                                     |
| <b>Frameworks</b>  | - | Pandas, NumPy, Scikit-learn, TensorFlow, Power BI, Tableau      |
| <b>MLOps</b>       | - | MLflow, DVC, Docker, GitHub Actions, Apache Airflow             |
| <b>Databases</b>   | - | Oracle SQL Server, MongoDB                                      |
| <b>Cloud</b>       | - | AWS                                                             |
| <b>Others</b>      | - | ETL Pipelines, Data Governance, Data Modeling, Streamlit, Flask |

---

## Projects

- **Banking ML Initiatives (In-House with Data Science team)**
  - Developed a recommendation system for targeting new banking customers
  - Built a loan eligibility prediction model using customer profiling
  - Conducted customer segmentation using clustering for personalized services
  - Co-developed an internal GPT-based assistant trained on policies and circulars
- **End-to-End Network Security Classification**
  - Built a pipeline using XGBoost and MLflow to classify network traffic anomalies
  - Deployed the solution to AWS EC2 using Docker for real-time performance
  - <https://github.com/erandawi/NetworkSecurity>
- **Hotel Reservation Prediction**
  - Identified the hotel reservation cancelation status
  - Built entire end to end project with mlops and Jenkins monitoring with GCP
  - [https://github.com/erandawi/hotel\\_reservation\\_prediction](https://github.com/erandawi/hotel_reservation_prediction)

---

## Education

### BSc (Hons) in Data Science

Coventry University (via NIBM)

*Expected: End of 2025*

---

## Certifications

- Machine Learning Specialization
  - Python for Data Science, AI & Development
  - Data Warehouse - The Ultimate Guide
  - AWS Certified Data Engineer Associate 2025 - Hands On! (following)
  - The Ultimate Hands-On Hadoop: Tame your Big Data! (following)
  - Beginner to Advanced MLOps on GCP-CI/CD, Kubernetes Jenkins (following)
- 

## Experience

### Data Governance Analyst / Data Analyst

Sampath Bank

*Jan 2025 – Present*

- Created Power BI dashboards and optimized SQL queries for business reporting
- Maintained data integrity and collaborated with data engineers on ETL tasks
- Contributed to multiple ML projects including recommendation systems and customer segmentation
- Participated in developing an internal LLM/GPT-based tool for bank operations

### Freelance Data Scientist / ML Engineer

Remote

*Jan 2023 – Present*

- Built and deployed ML/DL models for clients using MLflow, Jenkins, DVC, Flask, and Streamlit
- Designed data visualizations and BI dashboards to support decision-making
- Automated model deployment to AWS and containerized workflows with Docker

### Banking Operations Staff

Sampath Bank

*Dec 2017 – Dec 2024*

- Developed in-depth knowledge of banking systems, customer service, and regulatory processes
